

CURBELL
MEDICAL

MATTRESSES
FOR STRETCHERS AND HOSPITAL BEDS

A LONG HISTORY IN THE INDUSTRY

Curbell has been supplying hospitals and long-term care facilities with innovative products for over 50 years. We have strong relationships with bed, television, and nurse call system manufacturers, and we work closely with them to ensure that our products work properly and safely with all types of equipment. Most importantly, we work with you, to create custom solutions that meet your requirements and specifications.

OUR COMMITMENT TO QUALITY

Curbell works to continuously improve our operations, products, and services. Our quality management system complies with ISO 13485, and we are compliant with all government and industry regulations. We are also medical device listed, and are a current Good Manufacturing Practices (cGMP) Compliant Facility.

CONTENTS

We're regularly adding to our product line. If you don't see what you need, call Curbell at 1-800-235-7500.

REPLACING YOUR MATTRESSES

Your mattresses get a lot of use and abuse — especially stretcher mattresses that are moved from department to department many times each day. As mattresses get worn out, there may be holes and tears in the fabric that allow blood or other bodily fluids to enter the mattress.

Between 2011 and 2016, the FDA received over 700 reports of mattress covers failing to prevent these fluids from entering the mattress¹. Some reports indicated that “if blood and body fluids from one patient penetrate a mattress, they can later leak out from the mattress when another patient is placed on the bed.”

Aside from being a safety concern for both your patients and your staff by increasing avoidable infections (and their associated costs), a damaged mattress decreases overall patient confidence in their care. Following these simple tips from the FDA can help you make sure that your mattresses are in good condition and ready for patients.

DEVELOP AN INSPECTION PLAN

- ▶ Create an inspection plan for all mattresses in your facility.
- ▶ Check the expected life of the mattress and the mattress cover.
- ▶ Contact the bed mattress cover manufacturer for any additional questions.

INSPECT

- ▶ Regularly check each mattress cover for any visible signs of damage or wear.
- ▶ Routinely remove the mattress cover and check its inside surface for wet spots, staining, or signs of damage or wear.

REMOVE AND REPLACE

- ▶ Remove any damaged, worn, or visibly stained mattress according to your facility's procedures and the manufacturer's instructions.
- ▶ Immediately replace any mattress cover with visible signs of damage or wear to reduce the risk of infection to patients.

MAINTAIN

- ▶ Clean and disinfect undamaged medical bed mattress covers according to the manufacturer's guidelines.
- ▶ Do not use the mattress as a pin cushion for needles.

FDA, November 20, 2017. <https://www.fda.gov/MedicalDevices/ProductsandMedicalProcedures/GeneralHospitalDevicesandSupplies/HospitalBeds/ucm585737.htm>

CHOOSING A MATTRESS

On the surface, most mattresses look pretty much alike — most of them are just blue rectangles, after all. But what's inside (*and* out) can have a big impact on patient comfort, patient safety, and durability.

Comfort, safety, and durability, aren't independent of each other. A mattress that's so thin that the patient "bottoms out" onto the bed or stretcher is not just uncomfortable — it's also unsafe, as an unsupportive mattress could lead to pressure injuries. A mattress that lets fluids leak into its seams isn't just unsafe — it's also less durable, as those fluids can cause the foam to degrade. When choosing a mattress, keep all of these things in mind; and if you're having trouble figuring out what you need, contact your Curbell sales representative at 1-800-235-7500.

COMFORT **SAFETY** **DURABILITY**

FOAM TYPE AND THICKNESS

Boarding times for patients in the ED vary greatly, and some can be on stretchers for many hours¹ before they get moved to a room.

Consider what type of foam and thickness will be appropriate for your stretchers and beds to provide comfort and to minimize risk from pressure injuries.

Options include memory foam, which allows the patient to be immersed into the mattress reducing pressure to body regions that are susceptible to pressure injuries; and non-powered reactive mattresses that deliver dynamic response to patient movement.

FIT

Stretchers and beds may look the same size from one model to the next, but there can be several inches difference from one to the next. Make sure you get the right size for your stretcher or bed frame.

PATIENT WEIGHT LIMIT

Consider your patient population and make sure your mattresses can support their weight.

FLUID RESISTANCE

Fluids can make their way into mattresses via several routes, from the seams and zipper to tears and punctures

For maximum fluid resistance, look for seams that are welded, rather than sewn, as well as zippers that aren't completely exposed.

CLEANABILITY

Make sure your mattresses are able to withstand your hospital's cleaning protocol. A less expensive material might seem appealing from a budget standpoint, but the disinfectants your hospital uses may cut its life short.

For the best durability and resistance to bleach and peroxide, look for a mattress cover made of a polyester-coated knit with a polycarbonate additive.

TESTING

The mattresses that came with your beds and stretchers were tested to various standards, and the mattresses that replace them should, too.

The Support Surface Standards Initiative (S3I) was founded in 2001 to fill the need for performance and reporting standards. It develops uniform terminology, test methods, and reporting standards for support surfaces, and with the affiliation with ANSI/RESNA, it became the official standards body for the United States.

PRESSURE INJURIES

A pressure injury is localized damage to the skin and underlying soft tissue usually over a bony prominence or related to a medical or other device. The injury can present as intact skin or an open ulcer and may be painful. The injury occurs as a result of intense and/or prolonged pressure or pressure in combination with shear.

2,500,000

2.5 million patients per year develop a hospital-acquired pressure injury (HAPI)

Patients with hospital acquired pressure injuries (HAPI) have a median excess length of stay of 4.31 days

60,000

60,000 patients die every year as a direct result of pressure injuries

Patients with HAPIs have higher 30-day readmission rates (22.6% vs. 17.6%)

\$11,000,000,000

HAPIs are estimated to cost \$11 billion per year

HAPI rates are increasing while all other hospital acquired conditions are decreasing

CURBELL CAN HELP

Our non-powered reactive mattresses offer both a high level of comfort, as well as additional protection against skin breakdown. Inside are a series of interconnected air cells that deliver dynamic response to patient movement without electricity or loud motors. See page 9 for stretcher mattresses and page 15 for bed mattresses.

Two of the internal air cells

CLEANING AND DISINFECTING

Wipe down mattresses with one of the disinfectant cleaners listed below. Curbell's mattress covers were tested with these cleaners, and none were found to cause fading or damage to the material. Visit the mattress section of www.curbellmedical.com for the most up-to-date list of compatible cleaners. If your disinfectant is not listed, please contact Curbell.

- > 3M®: Quat Disinfectant Cleaner
- > Advanced Sterilization Products: Cidex®

- > VIROX: 256
- > Wayne®: Concept 256N Disinfectant

Cleaning solutions that contain bleach or peroxide should only be used on polycarbonate mattress covers.

Although we do offer polyurethane mattresses, this material isn't resistant to bleach and peroxide. Polycarbonate is our standard material.

CLEANING TIPS

Mattress disinfection is an important part of any hospital's infection control program. But the harsh chemicals that are used can damage the mattress over time. Follow these tips to get the most out of your mattresses.

1

FOLLOW THE INSTRUCTIONS

Make sure you follow the instructions not just for whichever cleaning agent you're using, but for the mattress itself. Not all mattresses are compatible with all common disinfectants, and using the wrong one can damage the mattress over time.

3

WAIT OUT THE "DWELL TIME"

The instructions for the disinfectant may mention the "dwell time". This is the amount of time that a surface must remain wet to allow the chemical to be in contact with an organism in order to kill it. Make sure you let the disinfectant do its job before wiping it off.

2

DILUTE IF NECESSARY

Some disinfectants are intended to be diluted before use. Using them at full strength can shorten the life of the mattress.

4

RINSING IS A MUST

After the dwell time has been achieved, immediately rinse the surface with clean warm water.

STRETCHER MATTRESSES

CARE TEAM TIP

Individuals who access care through the Emergency Department require early intervention to identify risk for pressure injury prevention. The appropriate support surface is a primary component of any care plan. By selecting a support surface to immerse and envelop the individual's body, damage to the soft tissue is minimized.

CHOOSING THE RIGHT STRETCHER MATTRESS

STRETCHER MATTRESS FEATURES

STANDARD FEATURES ON ALL MATTRESSES

WATERFALL ZIPPER FLAP

The waterfall zipper flap covers the zipper, so fluids pass over it without absorbing into the mattress.

PERFECT FIT

All our mattresses are accurately made to be a perfect fit on your stretchers.

POLYCARBONATE FABRIC

Our mattresses feature a durable anti-microbial polyester-coated knit with a polycarbonate additive. This material is resistant to bleach and peroxide.

Our standard mattress is also available in polyurethane material which is less expensive, but less durable and not resistant to bleach and peroxide.

HOOK AND LOOP FASTENER

Each stretcher mattress comes with a six-foot strip of adhesive hook-and-loop faster so you can position at the best spot for your stretchers.

CLAMSHELL ZIPPER

A clamshell zipper that goes around three sides, making replacement of the cover easy.

RF WELDED SEAMS

Rather than a sewn seam, our seams are sealed using radio frequency welding to prevent fluid ingress. (Only available on polycarbonate material.)

BI-DIRECTIONAL STRETCH

Our breathable, two-way stretch fabric gives added comfort and durability, and also prevents “hammocking,” allowing for easier patient transfer.

THREE YEAR WARRANTY

We stand behind all our stretcher mattresses with a three year warranty.

FIRE SAFETY

All our foam meets Fed 1633 fire safety standards.

THOROUGH TESTING

All of our mattresses are tested by Support Surface Standards Initiative (S3I). Visit <https://npiap.com/page/S3I> for more information on this organization.

MADE IN THE USA

All of our mattresses are manufactured in the USA.

UNIQUE FEATURES ON SOME MATTRESSES

SLOPED HEEL SECTION

Our non-powered reactive mattresses feature a sloped heel section to help provide pressure point comfort.

MEMORY FOAM

Memory foam allows the patient to be immersed into the mattress, which reduces pressure to body regions that are susceptible to pressure injuries.

HIGH-TACK BOTTOM COVER

The bottom covers of our non-OB/GYN stretcher mattresses are made from a high-tack thermoplastic polyurethane which provides a strong grip to the stretcher surface.

AIR CELLS

Our non-powered reactive mattresses contain a series of interconnected air cells that deliver dynamic response to patient movement without electricity or loud motors.

PATIENT WEIGHT LIMIT

Depending on their construction, our mattresses provides support to patients of up to 300 to 500 pounds without the patient resting on the stretcher frame.

STANDARD FOAM

Curbell's standard stretcher mattresses are economical replacements that meet or exceed OEM specifications. They feature two layers of high density medical-grade foam, anti-microbial fabric, and are available in sizes that fit most stretcher frames.

- WATERFALL ZIPPER FLAP
- RF-WELDED SEAMS

UNIQUE FEATURES ON SOME MATTRESSES

SLOPED HEEL SECTION

Our Comfort and Non-Powered Reactive mattresses feature a sloped heel section to help provide pressure point comfort.

AIR CELLS

Our Non-Powered Reactive mattresses contain a series of interconnected air cells that deliver dynamic response to patient movement without electricity or loud motors.

MEMORY FOAM

Memory foam allows the patient to be immersed into the mattress, which reduces pressure to body regions that are susceptible to pressure injuries.

PATIENT WEIGHT LIMIT

Depending on their construction, our mattresses provides support to patients of up to 450 to 500 pounds without the patient resting on the bed frame.

STANDARD FOAM

Our standard bed mattresses offer a high level of comfort at lower price than the OEM. They'll fit most standard beds and feature three layers of medical-grade foam. Firm foam sides give extra support when a patient is sitting on the edge of the bed, and the standard fire barrier meets CAL129/FED1633 fire rating.

OTHER PRODUCT LINES

In hospital rooms around the world, patients are dealing with demands on their health, and staff members are dealing with demands on their time. Curbell Medical is at the center of it all, with product lines that have set the standard for hospital room integration. For more than 60 years, we've made sure that patients can expect the best possible experience. And our salespeople make sure that our customers can expect the same, bringing decades of experience to partnerships that are built for the long haul. Whether it's a visionary product or a tried-and-true relationship, there's integrity in everything we build.
