

GEN4+® PILLOW SPEAKERS WITH BACKLIGHTING

Our Gen4+ pillow speakers for Rauland® Responder® 5 systems are now available with backlit buttons. Just plug the pillow speaker into the patient station and all the buttons will be clearly and evenly lit from behind to make them visible in any light — without negatively affecting nurse call system functionality. With a backlit Gen4+ Pillow Speaker, your patients will no longer be left in the dark — they'll have just enough light to see the buttons without keeping them up at night.

PATIENT SATISFACTION

Knowing that patients aren't always at full strength when in the hospital, we've concentrated on making Gen4+ easy to use to give them better control of their environment in a situation in which they might feel powerless.

- ▶ Buttons are easy to find and press
- ▶ Streamlined and lightweight case, like home remote controls
- ▶ Clean, clear sound
- ▶ Optional headphone jack to help minimize noise

INFECTION CONTROL

Hospital-acquired infections can be very costly, so Gen4 is sealed to help prevent infectious contaminants from getting into the case where they could be passed from patient to patient.

- ▶ Ingress Protection Rating of IP54 as defined by IEC 60529.*
- ▶ Smooth shape allows for quick and easy cleaning, and helps to prevent contaminants from collecting on the unit.

* For units without a headphone jack

Gen4⁺

VISIBILITY
Backlighting makes all the buttons easy to find in the dark. When the lights are on, the high-contrast case color and graphics make it easy for patients to find and use.

DURABILITY
The high-impact case material is designed to withstand over 100 drops onto a concrete floor without impacting its functionality.

SEALED CASE
The sealed design reduces the potential risk of infectious fluids or solids settling into the unit. No exposed screws means one less area to attract dirt.

EASIER-TO-PRESS BUTTONS
Large buttons are recognizable at a glance and easy to press.

CRISP, CLEAR SOUND
Clear, high quality sound to increase patient satisfaction.

SPECIFIC NURSE CALL BUTTONS
Enable patients to relay their specific needs to the nursing staff.

DASH BUTTON
Allows patients to access digital subchannels

EASY TO CLEAN
The streamlined design facilitates quick and easy cleaning to aid in infection control.

FLEX AND STRAIN RELIEF
The long flex relief is designed for longer life and greater flexibility. Internal strain relief prevents damage to internal components.

COUNT ON CURBELL

FOR INNOVATION

From our first pillow speaker in 1962, Curbell has consistently led the industry with innovative features like nurse call integration, direct access to TV channels, and extensive room controls. With easy-to-press buttons and clean design, our new Gen4+ Pillow Speakers are the latest in our long line of industry-leading patient control devices.

FOR EXPERTISE

Leading manufacturers of nurse call systems, healthcare TVs, and patient engagement systems depend on Curbell for their specialized private-labeled pillow speakers. When it comes to replacing pillow speakers in your hospital, count on Curbell to share the latest market insights and understand your specific needs to recommend the right unit for your patients.

FOR QUALITY

In the US, pillow speakers are classified as Class 2 exempt medical devices, and manufacturers must be registered with the FDA. Curbell is fully compliant with all government and industry regulations. Gen4+ is designed, manufactured, and tested to strict standards, including UL 1069, which includes flammability, environmental, static discharge, and drop testing to ensure safe use for patients in hospital room settings.
